The screenshot shows the Visual Studio Code editor with a file explorer on the left and a code editor on the right. The file explorer shows a project structure with folders like .next, app, auth, fonts, and files like favicon.ico, globals.css, layout.tsx, page.tsx, node\_modules, prisma, .env, .gitignore, next-env.d.ts, next.config.mjs, package-lock.json, package.json, postcss.config.mjs, README.md, tailwind.config.ts, and tsconfig.json. The layout.tsx file is selected in the file explorer and open in the code editor. The code in layout.tsx defines a RootLayout component that takes children as a prop and returns a JSX element with a lang attribute and a body containing the children.

```
1 export const metadata = {
2   title: 'next.js',
3   description: 'Generated by Next.js',
4 }
5
6 export default function RootLayout({
7   children,
8 }) {
9   return (
10    <html lang="en">
11      <body> {children}
12    </body>
13  </html>
14 )
15 }
```

Membuat Halaman Utama Kosong terlebih dahulu dengan Layout.tsx untuk menyambungkan ke Page.tsx sebagai Menu User Nantinya

The screenshot shows the Visual Studio Code editor with the file explorer on the left and the code editor on the right. The file explorer shows the same project structure as the previous screenshot, but the page.tsx file is selected in the file explorer and open in the code editor. The code in page.tsx defines a RootPage component that takes children as a prop and returns a JSX element with a div containing the children.

```
1 import React from 'react';
2
3 export default function RootPage() {
4   return (
5     <div>
6       /* Add your components here */
7     </div>
8   );
9 }
10
```

The terminal output at the bottom of the editor shows the following messages:
