Membuat variable untuk validasi menyesuaikan isi form pendaftaraan

```
const validateForm = () => {
    const newErrors: { [key: string]: string } = {};
    if (!formData.fullName) newErrors.fullName = 'Name is required';
    if (!formData.email) newErrors.email = 'Email is required';
    if (!formData.password) newErrors.password = 'Password is required';
    if (formData.password !== formData.confirmPassword) {
        newErrors.confirmPassword = 'Passwords do not match';
    }
    if (formData.password.length < 8) {
        newErrors.password = 'Password must be at least 8 characters';
    }
    if (!formData.phone) newErrors.phone = 'Phone number is required';
    return newErrors;
};
```
